

## Assignment 6 - Simple User Registration Form

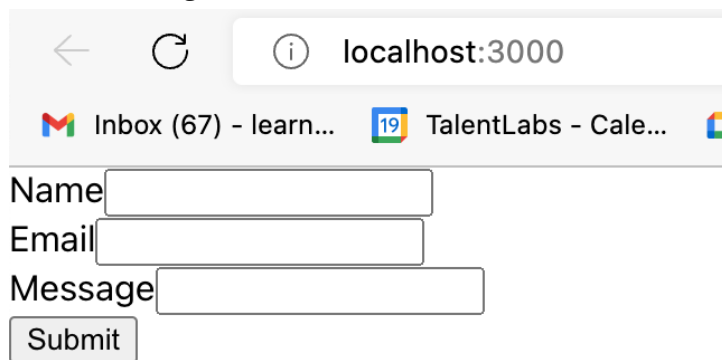

### Submission

- Delete the node\_modules folder in your project.
- Zip your project to a zip file called react\_assignment6\_{your\_name}.zip.
- Submit the zip file to Talentlabs Classroom.
- After the submission you can execute `npm install` to restore your node\_modules folder.

### Task - Creating a Simple Message Form

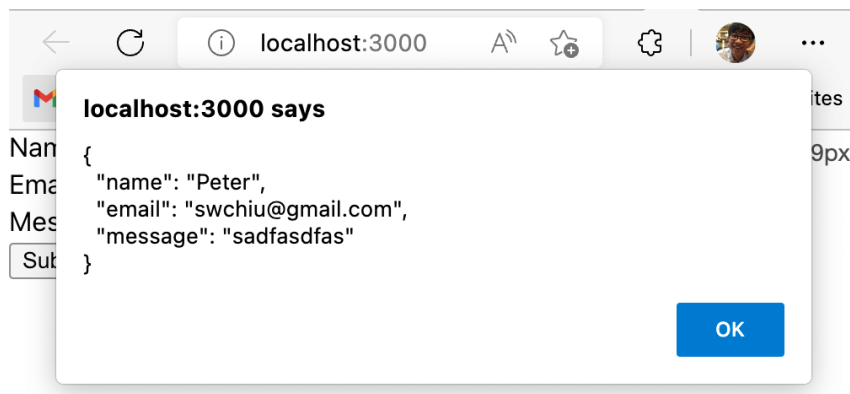

Step 1: Follow the usual steps in creating a new React Application

Step 2: Create a "Form" component with 3 fields (name, email and message) for users to send a message to the website owner.

A screenshot of a web browser window showing a simple message form. The browser's address bar displays 'localhost:3000'. Below the address bar, there are two tabs: 'Inbox (67) - learn...' and 'TalentLabs - Cale...'. The form itself consists of three text input fields stacked vertically, labeled 'Name', 'Email', and 'Message'. Below these fields is a 'Submit' button.

Step 3: Setup the "Submit" button. When the button is clicked, there will be an alert showing the message the user inputted as a JSON format, just like the screenshot below.

</talentlabs>

**Submission:** Submit the final source code to Talentlabs Classroom based on the submission instruction above. Please make sure the node\_modules folder isn't included in the submission.

**Grading Criteria:**

Criteria	Points (out of 100)
Created a function form	30
When submit button is clicked, there is an alert with the user input	30
The message in the alert is properly formatted instead of one long chain	20
Coding Style	20
